ONE in 285 children in the U.S. will be diagnosed with cancer by the time they are 20 years old.

2/3 of childhood cancer patients will have long lasting chronic conditions from treatment.

Childhood cancer is the leading cause of death by disease in children under the age of 19 in the U.S.

Children cancer is not one disease. It is made up of more than 12 major types and over 100 subtypes.

Despite these facts, childhood cancer research receives just 4% of the annual budget from the National Cancer Institute.
