

Childhood Cancer

By The Numbers 2021

43

Every day in the United States, **43 children, ages 0-19, are diagnosed with cancer.**

800

Every year, an estimated 300,000+ new cases of cancer affect children worldwide. **That's over 800 new kids affected every day.**

Childhood cancer survivors are **twice as likely to suffer chronic health conditions.**

Childhood cancer is the **leading cause of death** by disease in children under the age of 19 in the U.S.

One in 285 children in the U.S. will be diagnosed with cancer by the time they are 20 years old.

285

4%

Despite these facts, childhood cancer research receives just **4%** of the annual budget from the National Institutes of Health.
